

Embroidery Machine – Moving the Design

Step 1: Prepare the project

- Start with the design loaded and ready to sew, and the proper hoop loaded and in place. For assistance with these steps, see the Technique Tutorials on “Embroidering a Design from the USB Drive”, and “Loading the Hoop.”

Step 2: Tap the Home key

- Tap the house icon at the top right-hand corner of the screen

Step 3: Open the Edit screen

- In the screen that pops up, tap the gridded box icon to enter Edit mode.

Step 4: Move your design

- Use your finger or the stylus to drag the design to whatever part of the hoop you would like.
- The gridded lines on the screen match the gridded lines on the clear plastic hoop inserts. The insert can help you determine where to move the design on the screen. Be sure to remove the plastic hoop insert before beginning the embroidery.

Step 5: Return to the Ready to Sew screen

- When finished, tap the blue “OK” button on the bottom right.
